MONTHLY BULLETIN ON SOCIAL STATISTICS

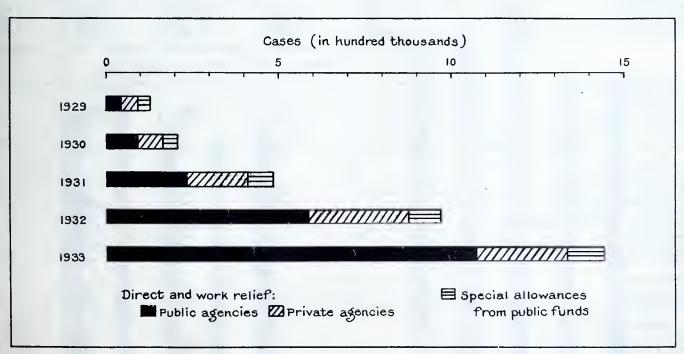

Average Monthly Number of Cases Aided through Different Types of Relief, 1929-33

Average Monthly Relisf per Cass, 1929-33

May Changes in Relief Expenditures and Cases

Chart 1.--Average monthly number of cases aided in 120 urban areas through direct and work relief administered by public and by private agencies and through special allowances from public funds, 1929-33

AVERAGE MONTHLY NUMBER OF CASES AIDED THROUGH DIFFERENT TYPES OF RELIEF, 1929-33

In 1933 approximately 25 times as many cases were aided per month in urban areas through general relief administered by public agencies as were aided through such relief in 1929. The average monthly

number of casee aided through general relief adminietered by noneectarian private agenciee increased during thie period about 7 timee; through veterane' relief administered by public agenciee, about 6 timee;

a Not computed.

through veterane' relief under private administration about 4 times; through general relief administered by Jatholic agencies, about 3 times; through general relief administered by Jewish agencies, more than twice; and through general relief administered by the Salvation Army, slightly less than twice.

In certain areas, especially in Ohio, general relief has been for a number of years under joint public and private administration. The average monthly number of cases receiving relief under such administration was about 20 times as large in 1933 as in

1929, or about the same as the increase in the number of cases aided in other areas through both public and private relief.

Public assistance in the form of old-age relief was negligible in 1929. During 1933 nearly 50,000 cases per month were aided through this form of relief in the reporting areas. Cases receiving mothers aid increased 44 percent between 1929 and 1933, and cases receiving aid for the blind, 57 percent.

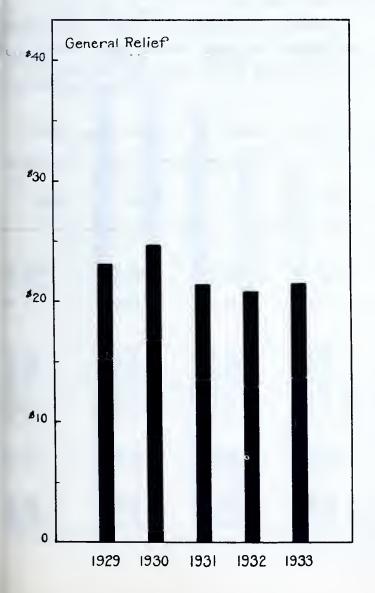

The changes in the average monthly number from year to year are shown in chart 1 and in table 1.

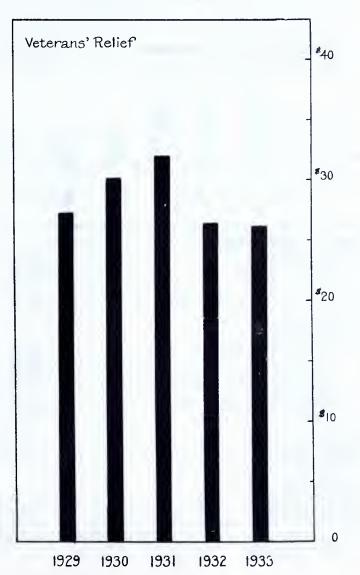

AVERAGE MONTHLY RELIEF PER CASE, 1929-33

The amount of certain types of relief provided per case per month varied considerably between 1929

and 1933. In other types of relief the average remained about the same (table 2, charts 2 and 3).

Chart 2.--Average monthly relief per case in public agencies in 120 urban areas, 1929-33

Expenditure for general relief administered by public agencies increased more rapidly between 1929 and 1930 than the number of cases aided, with the result that the amount provided per case per month was larger in 1930. In both 1931 and 1932, however, the number of cases increased more rapidly than the amount expended and the average per case declined. In 1933 the expenditure increased more rapidly than the number of cases aided. The average monthly amount provided in 1933 was approximately the same as in 1931 but less than was reported in either 1929 or 1930.

Throughout the period veterans' relief administered by public agencies averaged more per oase than general public relief. The average for veterans' relief rose rapidly in 1930 and also in 1931. It dropped in 1932 to less than the average in 1929. A slight further reduction occurred in 1933.

With the exception of general relief administered by Jewish agencies, the average monthly amount per case was less in private agencies than in public agencies. In nonsectarian agencies and in Catholic

agencies the average increased between 1930 and 1931 and between 1932 and 1933. Between 1931 and 1932 it decreased in both types of agencies and between 1929 and 1930 in nonsectarian agencies. The changes, however, were comparatively small.

In Jewish agencies the monthly amount provided per case decreased steadily between 1929 and 1933. In 1933 it was about one fifth less than in 1929.

Although the relief per case in the Salvation Army was low in all years, the 1933 average was more than twice as large as in 1929.

Veterans' relief under private administration averaged much less per case than veterans' relief under public administration. Except in 1931 the trend was downward.

The average amount expended per case for separately organized work relief under public administration increased rapidly through 1932. In 1933 there was a sharp decline.

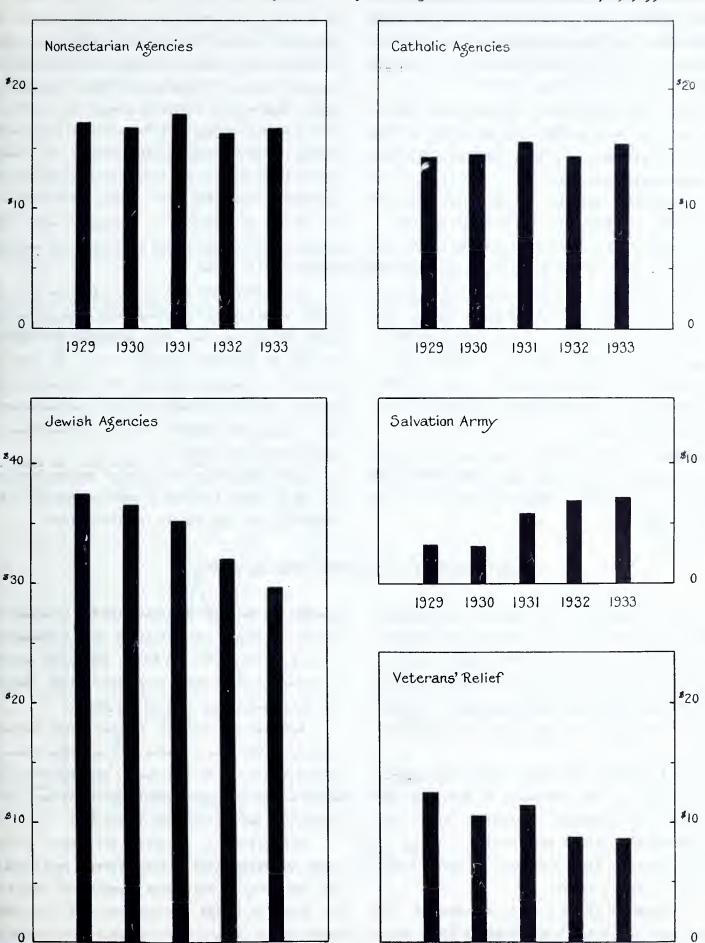

Separately organized work relief under private administration averaged more per oase in 1931 but much less in both 1932 and 1933 than in 1930.

(Continued on page 6.)

Chart 3.--Average monthly relief per case in private agencies in 120 urban areas, 1929-33

(Continued from page 4.)
As has been noted in preceding bulletins, the average monthly grant for mothers' aid increased through 1931. Since then the trend has been downward. The average in 1933 was about 6 percent less than in 1929.

The average monthly grant for old-age relief was larger in 1931 than in 1930, the first year it was extensively provided. In both 1932 and 1933 the average decreased markedly.

The average for aid to the blind increased through 1932. In 1933 there was a slight decline.

As these figures on average monthly relief per case do not include an estimated value for the large amount of Government-owned wheat and cotton distributed by the American National Red Cross during 1932 and part of 1933 and of pork and other commodities purchased and distributed through the Federal Surplus Relief Corporation during the latter part of 1933, they underestimate for these years the amount of relief provided per case.

Because of the decrease in living costs since 1929 the figures for the later years also represent a higher level of adequacy than is indicated by the averages presented. Study of the reasons back of the variations in the amount of different types of relief provided per case shows that the average varies primarily because of differences in the proportion of cases aided during brief periods of time and the extent to which the agency supplements the relief grants of other agencies. If much of the relief is given to cases requiring brief assistance, the average is usually smaller than in agencies assuming responsibility for continued relief. The grant is also small if much of the relief is provided in combination with other agencies rather than as the sole means of meeting a family's relief needs.

The monthly data used in the summaries here presented on the number of cases aided and the average monthly relief per case were assembled for 1932 and 1933 by the Children's Bureau. Prior to 1932 the reports for a large proportion of the areas were secured by the Russell Sage Foundation and made available through its courtesy for the Bureau's use in studies of relief trends.

Summaries by area and type of agency for these and other items included in monthly reports are in preparation for publication in printed form.

MAY CHANGES IN RELIEF EXPENDITURES AND CASES

Relief expenditures from public and private funds in the reporting areas totaled \$52,718,169 in May as compared with \$48,992,401 in April, an increase of 7.6 percent. This year's expenditure in May was larger than in any preceding month. As compared with May 1933 there was a rise of more than 40 percent.

Until this year relief expenditures have shown a seasonal tendency toward decrease in May. In 1929 the total amount expended from public and private funds decreased 4 percent between April and May; in 1930, 9 percent; in 1931, 8 percent; in 1932, 6 percent; and in 1933, 1 percent.

As is shown in tables 3 and 4 and chart 4, the May increase occurred mainly in public expenditures for direct relief and work relief. The amount expended by Catholic agencies and for veterans' relief under private administration also increased noticeably between April and May. The amount expended for these and other forms of private relief was much less this year in May than in May 1933.

Mothers' aid and aid for the blind increased slightly in May, as compared both with the preceding month and with May of last year. Old-age relief remained almost unchanged between April and May, but the expenditure was smaller than in May 1933.

For most types of relief the number of cases aided increased less rapidly between April and May than the amount of the relief expenditure. The average amount of relief provided per case was usually larger in May than in the preceding month or in May 1933 (table 5).

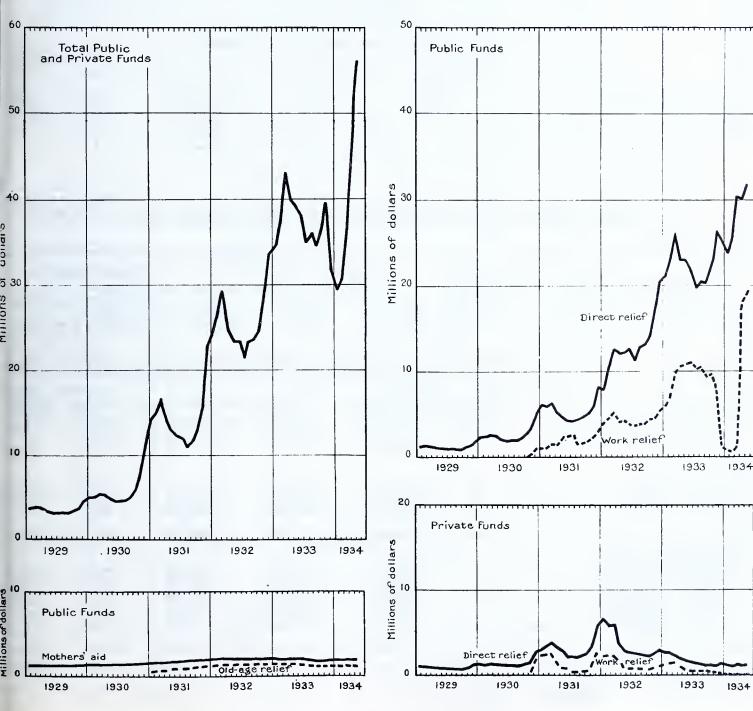

As these averages are based on the reports of a arger group of agencies and relate to a single month rather than a year, the amount provided per case in lay 1933 is not in agreement in all instances with the averages for 1933 shown in table 2.

The average amount provided by nonsectarian asencies was about the same in May 1933 as the average
for the year. In both April and May 1934 the amount
per case was much larger. The average amount prorided by Jewish agencies also increased. Through

1933 the trend in such relief was downward. The amount of relief provided per case by the Salvation Army continued in April and May the upward trend shown in the yearly averages.

In 31 of the 96 urban areas forwarding substantially complete reports in time for tabulation, the May expenditure was 25 percent or more in excess of the amount expended in the preceding month. The median change for the group was an increase of about 12 percent (table 6). (Continued on page 9.)

Continued from page 7.)
In 20 of the 94 areas forwarding comparable recorts between May 1933 and May 1934 relief expendicures increased 100 percent or more. In 22 areas the
cise was between 50 and 100 percent and in 23 areas,
cetween 25 and 50 percent. The median change for the
croup was an increase of about 45 percent.

In 88 of the 96 areas public funds financed 95 percent or more of the total expenditure for relief in May. The median proportion was 99 percent.

This year the daily average number of meals provided to homeless and transient persons and the daily average number of lodgings decreased 5 percent between April and May. As compared with May 1933 the number of meals increased 23 percent and the number of lodgings, 27 percent.

In 1933 the number of meals and lodgings deoreased about 12 percent between April and May. From 1929 through 1932 the decrease was about 20 percent.

Table 6.--Amount expended for relief during May 1933, April 1934, and May 1934, and percentage from public and from private funds, as reported by 908 agencies for 96 urban areas

[Urban areas included in this table are those for which reports from public and private agencies are believed to be sufficiently complete for use in determining local trends. Figures are preliminary and subject to revision.]
